

Task 1: Python File Handling & Automation

The image shows a Visual Studio Code editor window with a Python file named `file_handling.py` open. The file is located in a project named `Alfido_Task`. The code in the file performs the following actions:

- Imports `os` and `shutil`.
- Creates a file named `sample.txt` with the content "Hello Alfido Internship".
- Reads the content of `sample.txt` and prints it.
- Renames `sample.txt` to `new_sample.txt`.
- Creates a folder named `backup`.

The terminal output shows the execution of the script:

```
(venv) abhinavkumar@Abhinavs-MacBook-Air alfido-python-task2 % cd ~/Desktop/python\ intern
python file_handling.py
✓ File Created
Content: Hello Alfido Internship
✓ File Renamed
✓ File Moved
✓ File Deleted
○ (venv) abhinavkumar@Abhinavs-MacBook-Air python intern %
```
